the main objective of this book is to enlighten readers on the automatic protection control and monitoring of power systems the focus is on the development of intelligent protective algorithms to combat ferroresonance and sub synchronous resonance SSR in both traditional networks and smart grids initially the book covers the theoretical aspects of ferroresonance SSR and protective relays it then discusses the occurrence of ferroresonance and SSR in the grid and the impact of these phenomena on the operation of electrical components and a variety of protective relays intelligent algorithms are designed and tested for various types of protective relays the book also introduces a power automation system known as the universal protection control and power energy management centre upcpemc this SCADA based centre includes hardware components and new software for simulation analysis protection control and power system component design additionally it includes power and energy management programs that are suitable for use in both traditional networks and smart grids

nearly 50 years ago Karl Pribram in a discussion section accompanying Maclean's proposal of a limbic system criticized the visceral or limbic brain concept as theoretically too vague and cumbersome in a recent review of the limbic system Swanson points to Brodal's criticism that the discovery of connections of limbic structures with virtually all parts of

the nervous system render the concept of the limbic system useless and better abandoned additional dissatisfaction surrounding the limbic brain concept stems from the feeling that it is historically inert an antiquated 19th century construct in our current age of neural networks and parallel distributed process it is of little value merely an historical curio so why then this introduction to limbic brain anatomy we offer several interrelated rationales behind our labors recapitulation in the service of education although concepts had evolved in the second half of this century which effectively overthrew the idea of relatively isolated hemispheric districts i e striatal cortical and limbic parsing the hemisphere into these three districts was an important preliminary step achieved by our forebears in their efforts to understand the large scale structure of the higher mammalian cerebral hemisphere an examination of how the limbic brain concept came to be provides an opportunity to recapitulate the process of exploration discovery and understanding as it relates to one of these principle hemispheric domains
